COMPARE THE PRICE. WHY NOT THE QUALITY?

LOGISTICS SERVICE QUALITY & CUSTOMER SATISFACTION IN LITHUANIAN E-COMMERCE

Chaymae Elkasri / International Business Administration / Lithuania

THE CHALLENGE

**Delivery prices are easy to compare.
Service quality should be too.**

WHAT QUALITY INCLUDES

- Reliable, on-time delivery
- Parcels in good condition
- Clear tracking and complaint handling

THE POLICY OPPORTUNITY

EU parcel-delivery rules already support tariff transparency. Build on price information by testing clear, comparable measures of service quality.

CALL TO ACTION

MAKE DELIVERY QUALITY COMPARABLE.

Develop and test shared measures of reliability, on-time delivery, parcel condition and complaint handling.

WHAT COULD CHANGE?

TODAY

Price + estimated delivery time

→

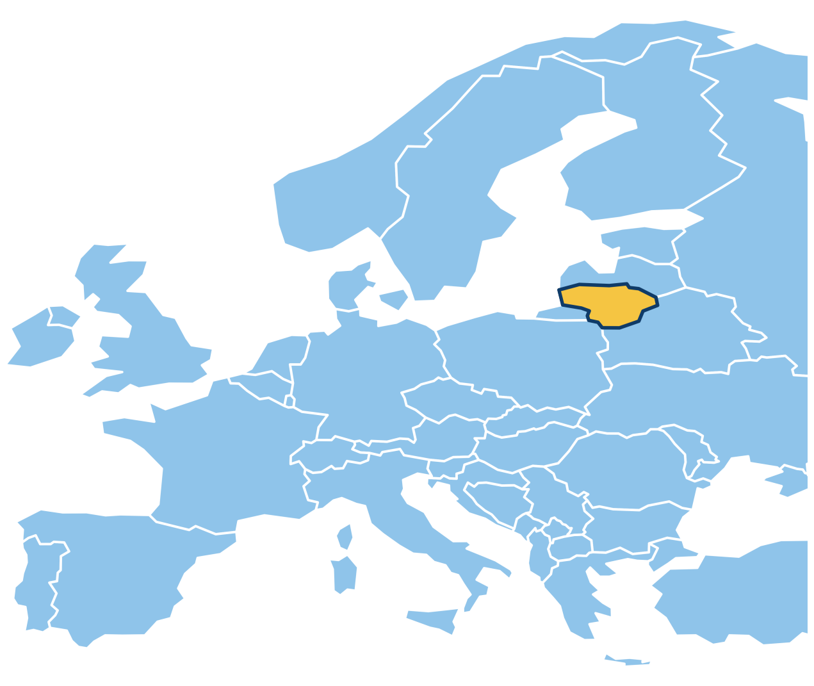
POSSIBLE FUTURE

Price + comparable service quality

Policy concept: shared indicators need clear definitions, fair verification and EU-wide testing.

LITHUANIA TO EUROPE

Local research to inform a wider European conversation about delivery quality.



FROM EVIDENCE TO ACTION

LISTEN	Understand what shoppers value
MEASURE	Define fair, reliable indicators
COMPARE	Test comparable quality information

KEY RESEARCH FINDINGS

71 submissions / 60 eligible responses / Return handling: n = 41

4.58 / 5
HIGHEST QUALITY RATING
Order accuracy

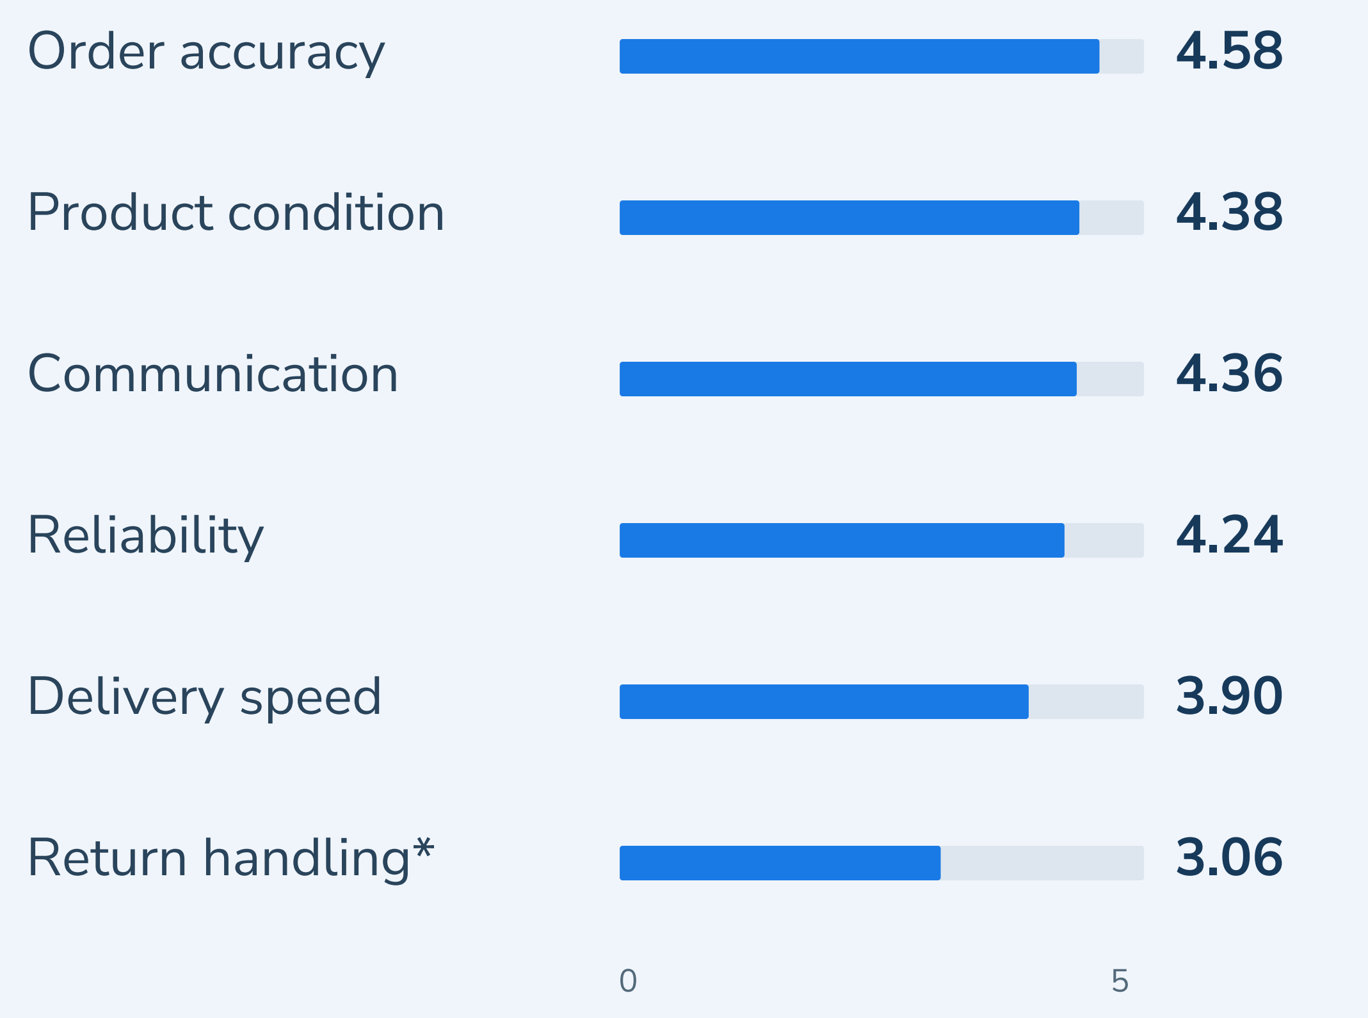
r = .586
STRONGEST LINK, n = 60
Communication

78.3%
TOP THREE PRIORITIES
Speed, reliability, condition

THE SURVEY EVIDENCE

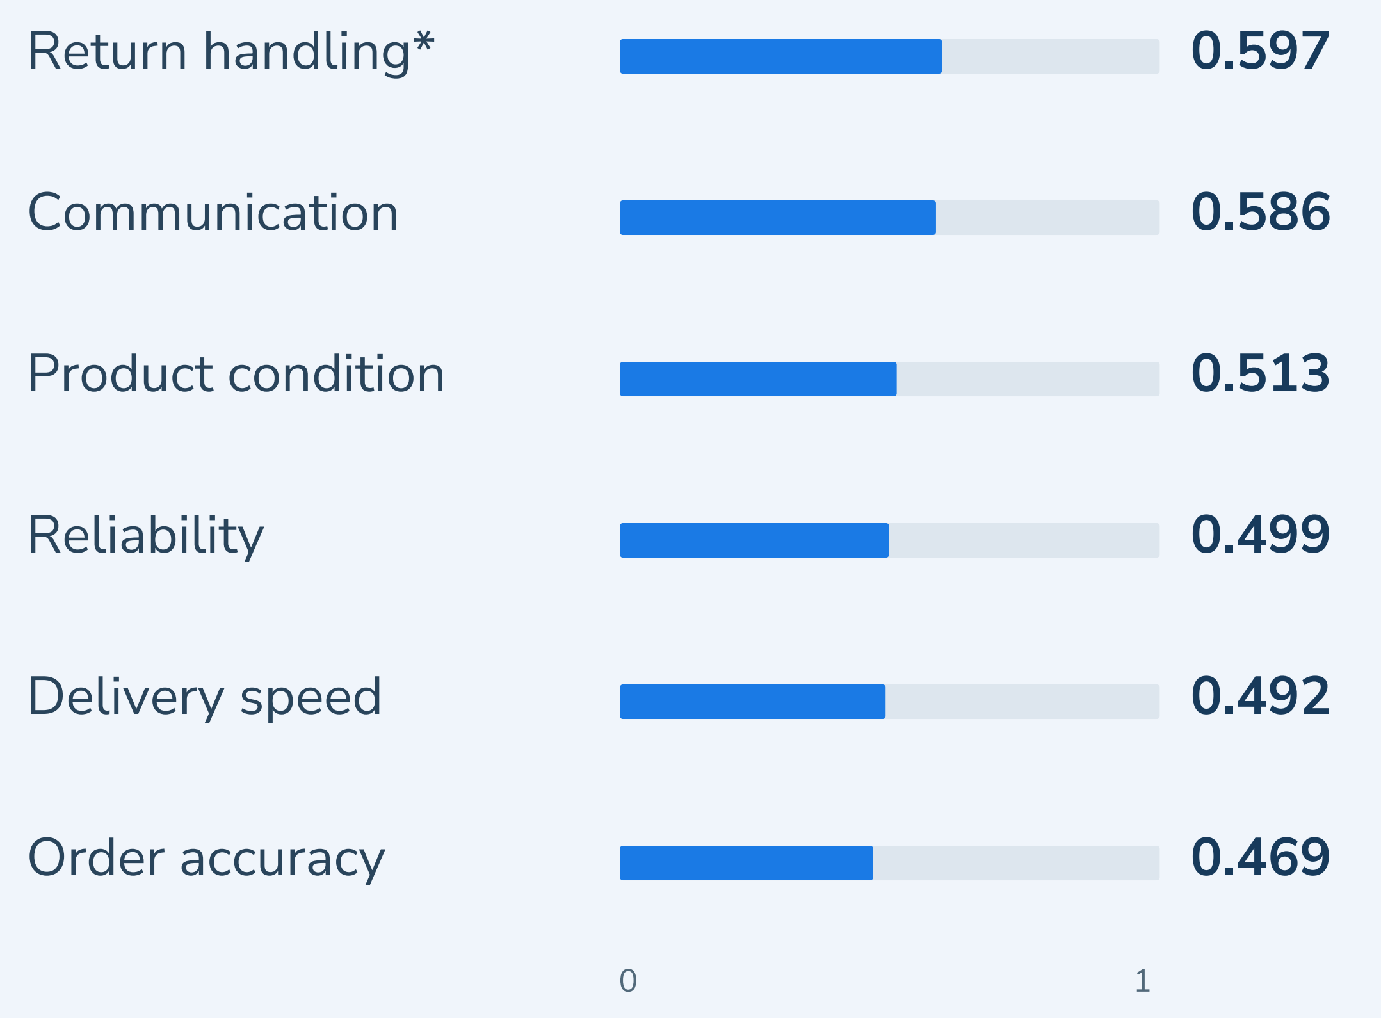
QUALITY RATING

Mean score / five-point scale



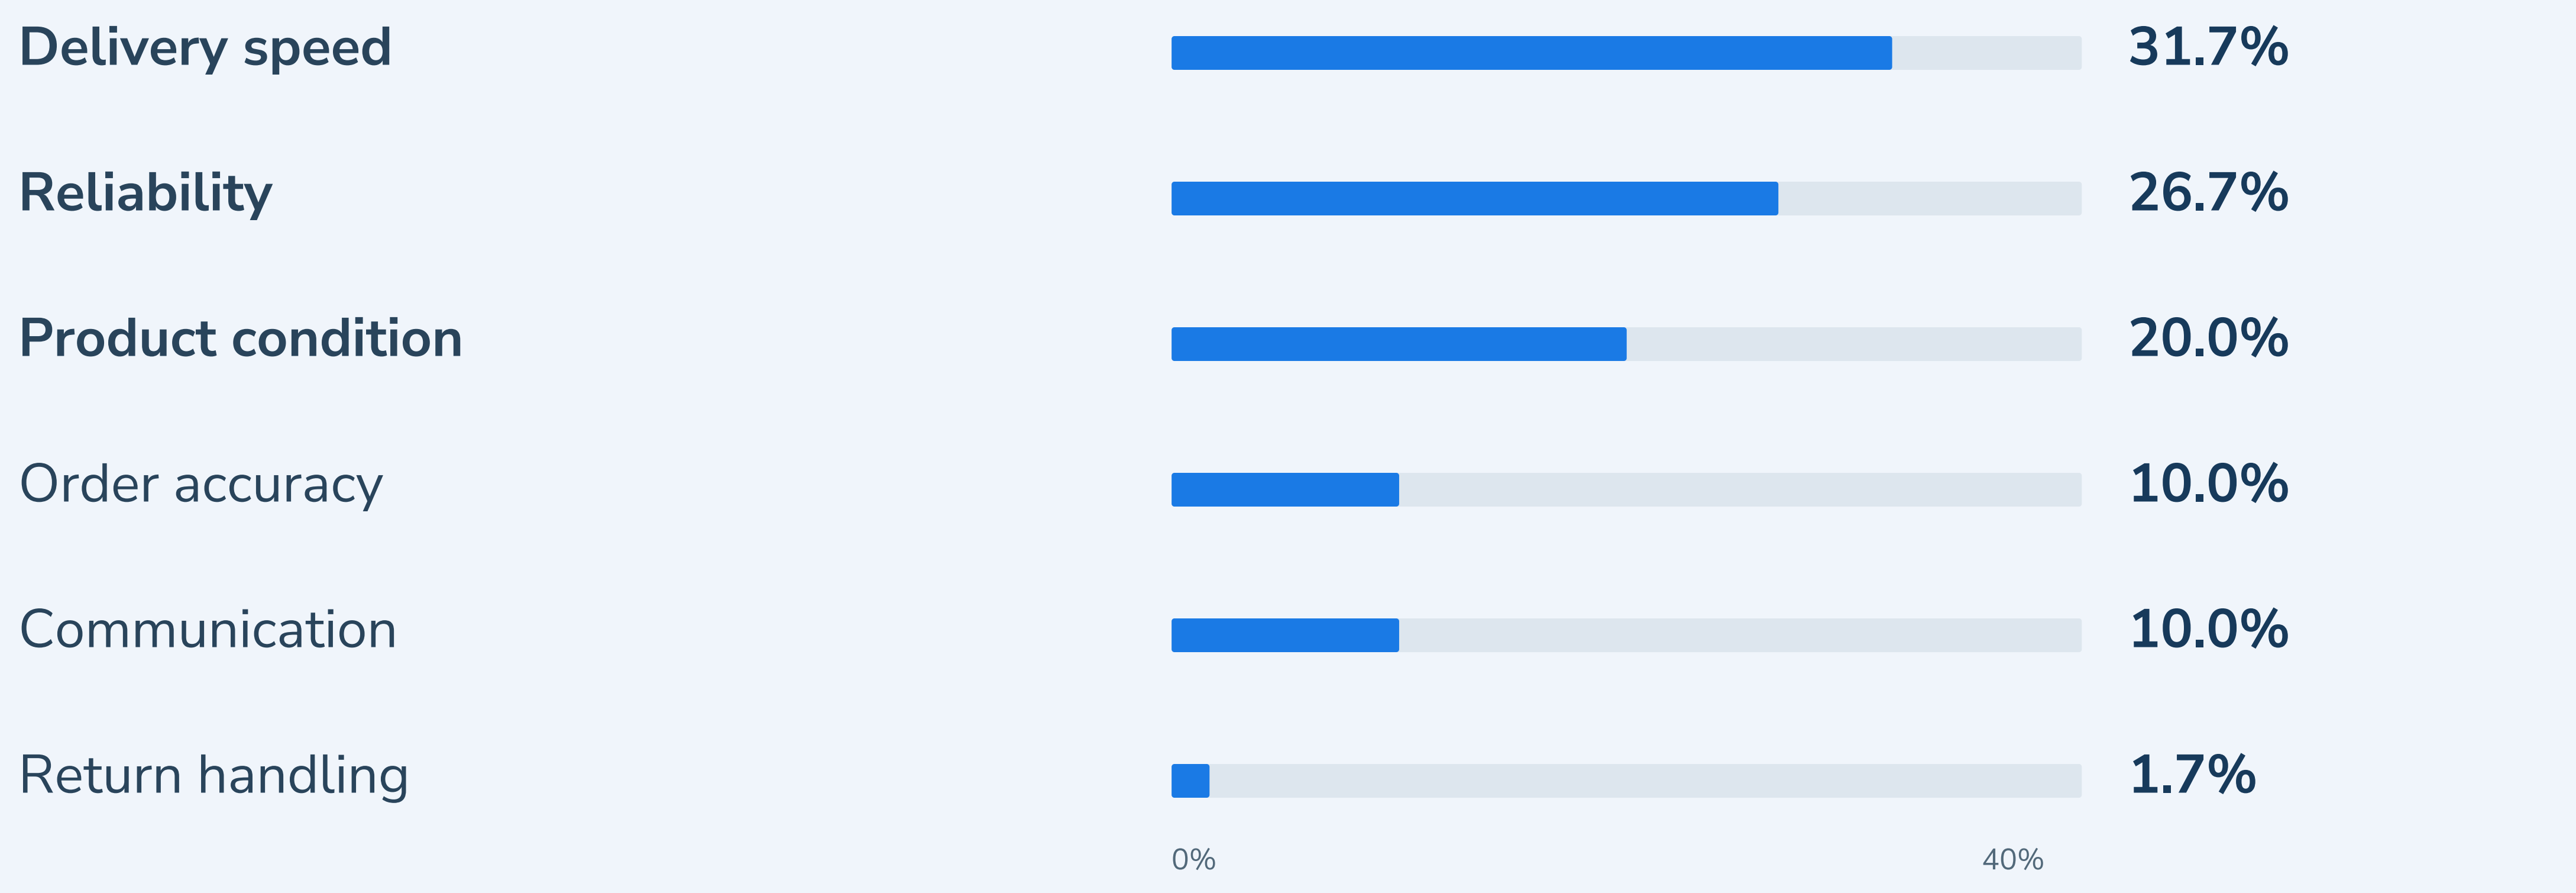
LINK TO SATISFACTION

Pearson correlation / r



WHAT SHOPPERS PRIORITISE

Share selecting each dimension as their top priority / n = 60



* Return handling: 41 complete paired responses; all other dimensions: 60. Correlation indicates association, not causation.

POTENTIAL BENEFITS

BETTER INFORMATION	COMPETITION ON QUALITY	CLEARER STANDARDS	CROSS-BORDER COMPARABILITY

METHOD

Cross-sectional online survey using convenience sampling. Participants had received an online-purchase delivery in Lithuania in the previous six months. Six quality dimensions used paired five-point items; satisfaction used four items. Analysis: descriptive statistics and Pearson correlations.

READ WITH CAUTION

Small, non-random sample (n = 60), below the planned 100–200. Findings are not representative of Lithuania or the EU and cannot establish causation.

EU POLICY CONTEXT

Regulation (EU) 2018/644 addresses cross-border parcel delivery, including tariff transparency. Quality indicators remain a proposal for testing.
